

# AN IMAGE CAPTURE DEVICE WITH A BOUNDARY INDICATOR

## ABSTRACT

5           An image capture device has an image sensor, a cone, a support arm,  
a base and an indicator. The image sensor, assembled within the cone, is  
utilized to capture an image of an object and generate an image signal thereof,  
while the support arm connects the cone and the base. The indicator comprises  
at least one lamp assembled within the rim of the cone for emitting light to  
10 demarcating an image capture area of the image capture device.
